How AGRI-SHARE Works in 3 Simple Steps

Bridging machine owners and nearby farmers with zero upfront investment.

1

Search & Match

Enter your village, equipment requirement, date, and hours. The system matches nearby available machinery.

2

Connect & Rent

Connect directly with the local owner or Custom Hiring Centre (CHC) with zero middleman commission.

3

Farm & Save

Complete your seasonal ploughing, spraying or harvesting on demand, saving up to 80% compared to purchasing.

Benefits for Small and Medium Farmers

Why equipment sharing is crucial for rural economic independence.

🚫 💸

Zero Debt & Capital Burden

Avoid taking ₹5,00,000 to ₹25,00,000 bank loans for equipment that sits idle for 10–11 months a year.

🛠️🛡️

No Repair or Maintenance Hassle

Pay strictly for operating hours. Machine servicing, tyre changes, and shed storage remain with the owner.

🤝📈

Extra Income for Equipment Owners

Farmers who own tractors or harvesters earn ₹50,000 to ₹1,20,000 extra per season by renting out idle machinery.

ℹ️ **Science Exhibition Notice:** Sample equipment listings, owner profiles, and distance figures (e.g., 2 km) are simulated for demonstration. Live equipment access connects to your configured Google Sheets database.

🔍 Search & Record in Sheet

📊 Open Find Sheet ↗

⚡ Auto-Fill & Run Judge Demo (Live Mouse & Typing)

Exhibition Quick Fill: Rotavator (Village A - 4 hrs) Tractor (Village B - 6 hrs) Sprayer (Village C - 3 hrs)

📋 Find Requests Sheet Destination Guide

How requirements and rental enquiries are recorded into your designated Google Sheet:

1. Google Form: **Find Agricultural Equipment**
2. Google Sheet: **Find Agricultural Equipment (Responses)**
3. Responses Tab: **Form Responses 1** (GID: 1857933895)
4. When farmers search or book, details (Farmer, Village, Date, Hours, Phone) reflect directly in the spreadsheet!

📊 Open Live Find Sheet ↗ ⚙️ Cloud Settings

⚙️ Real Google Backend Workflow

Important technical note: Google Forms alone cannot return dynamically filtered search results to the website. The live workflow is implemented as follows:

1. **Farmer Enters Request:** Submission is recorded in Google Sheets via Google Form "Find Agricultural Equipment" or Google Apps Script.

2. **Authoritative Source:** Google Sheets ("AGRISHARE EQUIPMENT DATABASE") stores all listings, status, and hourly rates.

3. **Matching Engine:** Google Apps Script queries the sheet, matches village, date, and equipment, and returns results to the website.

4. **Simulated Fallback:** When Google Apps Script is not deployed, the website runs in demo mode with simulated records.

Crop Calendar & Smart Seasonal Recommendations

Rule-based seasonal recommendations for agricultural machinery across Indian Kharif, Rabi, and Zaid crop cycles.

Select Month: October

CURRENT LIVE SYSTEM DATE

October

Kharif harvesting season — High demand for Harvesters and Threshers.

RULE-BASED AGRONOMIC MODEL

Seasonal Recommendations for October (October–November)

Recommended Agricultural Activity: Kharif harvesting (paddy, soybean, maize harvesting & threshing)

Recommended Equipment:

Harvester Thresher

Find Harvester Now → Find Thresher Now →

Annual Crop Mechanization Schedule

Month Period	Agricultural Activity	Recommended Equipment	Action
April–May	Land preparation (summer plowing, field leveling)	Tractor, Rotavator	Find This Equipme
June	Kharif sowing (monsoon onset seed drilling)	Seed Drill, Tractor	Find This Equipme
July	Sowing / transplanting and fertilizer application	Rotavator, Sprayer	Find This Equipme
August–September	Crop maintenance, pest management & foliar spray	Sprayer	Find This Equipme
October–November	**Kharif harvesting (paddy, soybean, maize)**	**Harvester, Thresher**	Find This Equipme
November–December	Rabi sowing (wheat, mustard, gram planting)	Seed Drill, Rotavator	Find This Equipme
January–February	Rabi crop maintenance, micro-nutrient spraying	Sprayer	Find This Equipme
March–April	Rabi harvesting (wheat, pulses harvesting & threshing)	Harvester, Thresher	Find This Equipme

> ⚠️ **Rule-Based Agronomic Model Disclaimer:**
>
> This feature is a deterministic rule-based seasonal recommendation system, not artificial intelligence. Actual farming schedules vary significantly depending on crop choice, geographic agro-climatic zones, monsoon rainfall variations, soil moisture, and localized agricultural advisories from Krishi Vigyan Kendras (KVKs).

📋 Google Setup & Placeholders

📖 About the AGRI-SHARE Project

School Science & Technology Exhibition Project — Digital Public Infrastructure for Rural Mechanization.

1. The Problem: Costly Machinery

In India, over **86% of operational farm holdings** belong to small and marginal farmers (<2 hectares). Modern farm mechanization (tractors, rotavators, harvesters) increases crop yields and reduces human drudgery, but purchasing a single tractor or harvester requires ₹5,00,000 to ₹25,00,000 in capital.

Smallholders typically utilize this equipment for **only 20 to 40 hours per year**. Purchasing leads to heavy rural indebtedness, high bank loan interest, and idle machinery rusting in village yards for 10–11 months annually.

2. How Shared Equipment Helps

AGRI-SHARE introduces a localized sharing platform connecting machine owners with nearby farmers. Instead of capital ownership, farmers use machinery on a flexible pay-per-use basis.

This converts an unbearable fixed capital liability into small, affordable operational expenses. Smallholders save up to 80% on mechanization, while equipment owners generate supplemental annual income.

3. Primary Backend: Google Forms & Sheets

The system requires **zero paid databases or subscriptions**:

- **Google Forms:** Collects equipment listings and search requests.
- **Google Sheets:** Functions as the authoritative source of truth for machine records, rates, and availability.
- **Google Apps Script:** Provides the REST API for live querying and matching without commercial cloud fees.

4. Prototype Limitations

- **Simulated Data:** When Google Apps Script is not configured, records and distances (e.g. 2 km) are simulated for demonstration.
- **Distance Matching:** Live GPS radius requires internet telematics hardware on machines.
- **Phone Privacy:** Direct contact numbers are masked on public cards to protect farmer privacy.

> ⚠️ **Mandatory Exhibition Disclaimer:**
>
> “This is an educational prototype. Sample listings and some distance figures are simulated. Seasonal recommendations are rule-based and should be verified with local agricultural experts. Live equipment availability depends on the configured Google Sheets integration.”

Technical Implementation Architecture

Clean separation between Frontend, Google Data Collection, and Google Sheets Source of Truth.

1. Frontend UI

Vanilla HTML5, CSS3, JavaScript. 7 core pages, interactive calculator, and dynamic seasonal calendar.

2. Google Forms

"List Your Agricultural Equipment" and "Find Agricultural Equipment" collecting farmer inputs.

3. Google Sheets Master

"AGRISHARE EQUIPMENT DATABASE" storing ID, Equipment, Owner, Village, Rate, Status, Best Month, Date, Contact.

4. Apps Script Engine

Executes live matching queries (doGet / doPost) and returns filtered JSON results to the website.

⚙ Configure Google Integration URLs & Settings
